I am a motivated second-year Information Technology student who enjoys turning ideas into practical software solutions. I am passionate about **learning new technologies, tackling challenging problem**s, and building projects that strengthen my technical and problem solving skills.

EDUCATION

Bachelor of Technology (B.Tech) in **Information Technology** — June 2026 - Present
Sri Krishna College of Engineering and Technology, TN, India — Present **CGPA: 9.31**

Senior School Certificate Examination - CBSE — June 2024 **-** May 2025
The Suguna Pip School, Coimbatore, TN, India — **Percentage: 93.2%**

SKILLS

Languages & Frameworks: C++, Python, Django, JavaScript, HTML, CSS, Rest API.

Tools & Platforms: Git, VS Code, MySQL, Linux (beginner)

Courses Taken: Software Engineering, Problem-Solving, Data Structures and Algorithms, Object-Oriented Programming, Relational Database Management Systems, Operating System

PROJECTS

MINISOCIAL: Built a **Django social media app** with profiles, posts, comments, and like/follow features using **Django ORM** and **JavaScript**.
Tech Stack: Django, Python, HTML, CSS, JavaScript, SQLite3
GitHub Repo: MiniSocial

CARTIFY: a full-stack **E-commerce** Web Application with product listings, a shopping cart, and order processing.
- Built relational models (Product, Order, OrderItem) with foreign keys, user authentication, and a session-based cart with checkout and per-user order history.
- Designed a responsive UI with live search, hover effects, and mouse-wheel image zoom using **JavaScript**.

Tech Stack: Django, Python, HTML, CSS, JavaScript, PostgreSQL
GitHub Repo: Cartify

INVISAIR : an interactive **Air Quality Visualization Website** with India pollution map and location-based AQI dashboards.
- Visualized **AQI, PM2.5, PM10**, and seven-day pollution trends.
- Integrated nearby-area comparisons, forecasts, and pollution-aware recommendations.
- Designed an atmospheric UI with animated **AQI** gauges and particle effects.

Live Demo: InvisAir-Vercel **| GitHub Repo:** InvisAir-GitHub

DISHA – **Digital Integrated Single-Window Hub for Approvals:** a **Flask**-based platform for **Maharashtra** industrial approvals, document verification, and application tracking.
- Implemented approval-readiness checks, Razorpay fee payments, receipts, role-based portals, compliance tracking, and a project-aware chatbot API.

Tech Stack: Python, Flask, SQLite, SQLAlchemy, HTML, CSS, JavaScript, Razorpay Test Mode
GitHub Repo: DISHA

INTERESTED AREAS

Web Development | Backend Development | Software Engineering | Full-stack engineering | Problem-Solving

CERTIFICATIONS

- Participated in **Adobe University Hackathon - 2026**
- Participated in **Smart India Hackathon – 2026 & 2025**
- Participated in inter - college **Codeathon - 2025**
- **IBM** Certified course on Getting started with Artificial Intelligence
- 13+ Certified courses on **Coursera**

AWARDS

- Finalist in intra – college **Prompt Engineering Hackathon - THRIVE - 2026**
- Intra - college **NeoCodeathon** Topper - 2025
- Best Outgoing Student of the year 2024 - 2025
- Leadership Excellence Award for leading the team for an inter-school competition
- Senior School Committee Leadership Award
